Experience

Research Engineer

CMAP x TotalEnergies

Sep. 2026 - Ongoing

Palaiseau

- Working on the ATLAS project (CMAP – École Polytechnique × TotalEnergies), investigating vulnerabilities of LLMs and designing defenses against Data & Model poisoning.

BNP Paribas

AI Research Intern

Mars. 2026 - Sep. 2026

Paris

- Developing defenses against data poisoning attacks using causality-based methods to improve model robustness in production ML systems.
- Evaluating privacy leakage risk through membership inference attacks on fine-tuned LLMs, informing internal compliance and security guidelines.

CEA LIST / DILS - In-painting using Generative AI for eXplainable AI Methods Evaluation

AI Research Intern

Feb 2025 - Aug. 2025

Grenoble

- Designed a generative AI inpainting pipeline to benchmark XAI methods, providing a quantitative measure of attribution methods correctness.

L'Oréal Paris, Research & Innovation

R&I Intern

June. 2024 - Aug. 2024

Aulnay-sous-Bois

- Developed a classification model for chemical entities using SMILES notation, using RNN/LSTM architectures.
- Database management including data collection, organization, cleaning, and analysis.

Hubert-Curien Laboratory

AI Research Intern

Oct. 2023 - May. 2024

Saint-Étienne

- Explored a new approach for generating emotional facial expressions using latent space diffusion models to enhance emotion recognition performance.

Education

MSc, École Polytechnique: Applied Mathematics & Statistics

Excellence scholarship holder. GPA: 3.9/4

Sep. 2025 – Oct. 2026

National Yang Ming Chiao Tung University, Taiwan

Exchange Semester in Artificial Intelligence. GPA: 4/4

Sep. 2024 – Jan. 2025

MEng, Télécom Saint-Étienne — Computer Science

Engineering Degree in Computer Science. GPA: 4/4

Sep. 2022 – Aug. 2025

Publications

GIEX: Generative Inpainting for the Evaluation of eXplanations

Conference paper

ICPR'2026

Lyon, France

- Proposed a novel eXplainable AI (XAI) evaluation protocol based on generative inpainting, which keeps perturbed samples in-distribution and makes faithfulness metrics more reliable.

Assessing Data Leakage Risk in Fine-Tuned LLMs

A* Conference paper

MPLR-FM @ NeurIPs'2026

Paris, France

- Derived theoretical upper bounds on data leakage risk in fine-tuned LLMs via membership inference attacks, quantifying how much private training data can leak through the model.

Skills & Activities

Activities

Oxford Machine Learning Summer School (OxML), Hi!Paris Hackathon

Programming

Python, C++, SQL, Java

ML & Tools

PyTorch, TensorFlow, scikit-learn, Git, Linux, Docker, $\text{\LaTeX}$

Languages

Arabic (*native*), French (*native*), English (*C1*)
